ONE MINUTE PRODUCT MEETING

StatusBlue

StatusBlue impression material combines the advantages of VPS with the properties of alginates. It displays the characteristics of alginates; such as short setting time, good hydrophilic properties and easy removal from the mouth. StatusBlue demonstrates outstanding detail reproduction, good recovery after deformation and dimensional stability.

Unlike alginates, StatusBlue is 100% dust free, can be cold disinfected, and allows for clean and safe impression taking. Additionally, impressions can be stored for weeks and reused indefinitely.

Its smooth surface produces outstanding temporaries and exact models. StatusBlue is suitable for every situation and was designed for use as a high efficiency alternative to traditional alginates.

FEATURES & BENEFITS

- › Exceptionally high tear strength
- › High dimensional stability, very long shelf life
- › Hydrophilic, pressure sensitive and extremely flowable for great detail reproduction
- › Repourable and reusable
- › Firm consistency for slump-free tray dispensing
- › Can be cold disinfected by immersion in germicidal solutions
- › Sets quickly for greater patient comfort
- › 100% dust free

PROCEDURES

- › Impression taking for temporaries, model-cast dentures, orthodontic models and opposing jaw models

COMPANION PRODUCTS

- › Luxatemp
- › Honigum
- › LuxaBite
- › O-Bite

ITEM # & DESCRIPTION

- 999693 | StatusBlue MixStar Cartridge
- 999826 | Automix Canister
- 999797 | Automix Tips
