

## 3 Ways Constic Simplifies & Enhances Your Practice

### 1. EFFICIENCY: 1 product performs 3 functions

By combining an etching gel and a bonding agent with a flowable composite, Constic eliminates steps in your workflow. This not only simplifies and speeds up your procedures, it eliminates potential sources of mistakes.

### 2. VERSATILITY: Ideal for many indications

Constic is ideal for small restorations of Class I and occlusal primary tooth cavities, pit and fissure sealing, base lining of Class I and Class II restorations, and blocking out and filling of undercuts. This outstanding versatility allows you to reduce the number of materials needed for your practice. It can be your cost-saving (and time-saving) “go-to” flowable.

### 3. STRENGTH: Delivers exceptional, worry-free bonding

Constic incorporates special bonding materials that etch and bond with dentin and enamel like a glass ionomer. University studies demonstrate Constic’s clearly superior bond strength versus other self-etching, self-adhesive flowable composites, which means you and your patients can have full confidence that Constic will hold strong.

## Constic: Delivering Efficiency, Versatility & Strength

### The simplicity of treatment

As a result of its chemistry, **Constic** delivers exceptional, worry-free bond strength in a single step application
