LuxaCrown

The chairside way to long-lasting crowns

SEMI-PERMANENT & FAST

The revolutionary semi-permanent crown and bridge material, LuxaCrown is a new class of chairside prosthetics, with its outstanding stability and durability. Produced with ease in one chairside session, it offers impressive long-term reliability of up to 5 years, fulfilling the need between simple temporary provisionals and permanent dental prostheses.

In-vitro studies into the relevant mechanical properties such as resistance to abrasion, fracture toughness and flexural strength have demonstrated the outstanding mechanical strength of the material.

RELIABLY STABLE & DURABLE

LuxaCrown is reliably hard and resistant, with an exceptional fracture toughness of > 2 MPa*m^0.5 ensuring stable restorations. *Data on file.

EXCEPTIONALLY VERSATILE

LuxaCrown is indicated for crowns and bridges, giving the remaining tooth long-term protection, to restore anatomical form, masticatory function as well as for esthetic corrections. It is well suited for the long-term monitoring of treatment success while bridging the gap during healing stages and in difficult restorations.

Exceptional efficiency and affordability, chairside.

LuxaCrown will attract patients with busy schedules and provide faster treatment, without compromising quality, and can also increase practice production and revenue. This cost-effective, long-lasting option allows for patients who might otherwise have to forego treatment, to now receive premium care.

FEATURES & BENEFITS

- Quick and easy technique
- Optimum mechanical properties
- Excellent fracture toughness and flexural strength
- High polishability
- Semi-permanent up to 5 years
- Long-lasting with excellent results
- Time and cost savings
- Reliable durability

PERFECT FOR

- Challenging restorative situations
- Implant cases
- Cosmetic restorative cases
- Pediatric cases
- Healthy aging adult patients
- Palliative patients
- Affordable restorative option

“Extremely impressed with the accuracy and stability of LuxaCrown. It is very easy to manipulate. The feel and texture trims similarly to composite to create very precise contours and margins. This is a product that dentistry has needed for a long time for multidisciplinary cases that require longevity.”

Dr. Hugh Flax, DDS, AACD, MICOI
