ONE MINUTE PRODUCT MEETING

Icon

Resin infiltration bridges the gap between remineralization and restoration. Icon provides an innovative, never-before-seen option for treatment of smooth surface and proximal carious lesions.

Instead of taking a “wait-and-see” approach, Icon can arrest the progress of early enamel lesions up to the first third of dentin – in one simple procedure, without unnecessary loss of healthy tooth structure. It is highly effective in treating white spot lesions in less than 30 minutes in one office visit. Icon stops progression of incipient lesions without the loss of any tooth structure.

Plus, as the resin will reflect the same color as the surrounding tooth structure, color or shade matching is not necessary. See successful clinical before and after photos at **#IconbyDMG** or visit **drilling-no-thanks.info**.

FEATURES & BENEFITS

- › Arrest early interproximal caries
- › Remove smooth surface white spots
- › No drilling
- › No anesthesia
- › One, quick patient visit
- › Highly esthetic results
- › Microinvasive technology
- › Preserve healthy tooth structure

PROCEDURES

- › White spots removal
- › Early caries infiltration

COMPANION PRODUCTS

- › MiniDam

ITEM # & DESCRIPTION

- 220402 | Icon Smooth Surface Mini-Kit
- 220403 | Icon Smooth Surface Cube
- 220400 | Icon Proximal Mini-Kit
- 220401 | Icon Proximal Cube
