## ONE MINUTE PRODUCT MEETING

### LuxaBond Total Etch

LuxaBond Total Etch is a dual-curing adhesive system that provides users with more reliable total bond strength through specifically shaped Endobrushes for an easier application in the root canal.

For easier handling, the pre-bond facilitates the superior adhesion properties of the system and allows for a longer processing time for the bonding mixture.

Since it cures with or without light, LuxaBond is especially well-suited for challenging adhesive cementation of posts, core build-ups, veneers, inlays, onlays, crowns and bridges. It is perfectly compatible with all commercially available light-cure, self-cure and dual-cure materials like LuxaCore Z-Dual, Vitique and PermaCem 2.0.

#### FEATURES & BENEFITS

- › Dual-curing
- › Self-curing: hardens even without light
- › Better adhesion
- › Compatible with all resins despite curing mode
- › Pre-bond facilitates quicker curing in the dentin for superior retention
- › Easier root canal application with special Endobrushes
- › Does not contain acetone

#### PROCEDURES

- › Bonding of posts, cores, crowns, bridges, inlays and onlays

#### COMPANION PRODUCTS

- › LuxaCore Z Dual
- › LuxaPost
- › Vitique
- › PermaCem 2.0

#### ITEM # & DESCRIPTION

212384 | LuxaBond Total Etch Intro Kit

212385 | Endobrush Refills (Bag of 25)
